

AUTONOVA

Silicon Sovereignty — Series A

Executive Summary — Confidential

VISION

Build sovereign 3D chiplet infrastructure that ends dependency on foreign fabs. AUTONOVA enables nation-states and private citadels to own compute, not rent it.

PROBLEM

The 3D chip war (\$3.3B → \$42.8B by 2035) concentrates power in 2 foundries. Supply shocks, export controls, and algorithmic governance create systemic risk.

SOLUTION

AUTONOVA Stack: (1) 3D Chiplet Architecture, (2) Encrypted Mesh Network, (3) Sovereign Governance OS. Modular, fab-agnostic, deployable in 18 months.

WHY NOW

Inflection in hybrid bonding, sovereign AI mandates, and capital flight to hard tech. First-mover advantage in 'private citadel' compute zones.

TRACTION

3 flagship visual assets delivered. Data room live. Partnership pipeline with sovereign wealth and defense primes in discussion.

BUSINESS MODEL

Licensing + sovereign deployment fees + encrypted mesh subscriptions. Target: \$400M ARR by Year 4 at 78% gross margin.

THE ASK

Raising \$2.0B Series A at \$20B pre-money. Use of funds: 45% R&D (3D packaging), 30% fab partnerships, 15% sovereign pilots, 10% team.
